### Disconnecting a CybraryN™ Software workstation from CybraryN™ Server Software

#### Issue

A CybraryN™ software workstation needs to be disconnected from the CybraryN™ Server Software.

#### Solution

1. Make sure that the CybraryN™ software is closed.
2. Locate the **internetsetup.dat** file, which can be found in the local Windows or WINNT directory.
3. Rename or delete **internetsetup.dat**.

**NOTE:** To reconnect the machine to CybraryN™ Server, you can either rename the file back to **internetsetup.dat**, or redo the Internet setup in the CybraryN™ software.
