

## CybrarySite™ Software

**Libraries**

**Schools**

**Corporations**

### Features

- Automatically reset to your home page after a predetermined period of inactivity.
- Works with proxy servers and Internet filtering systems.
- Supports the latest HTML standards.
- Can be run in kiosk mode.
- Option to force the program to remain maximized.
- Option to make CybrarySite™ software the default browser on the computer.
- Prevent browsing local and network drives through the address bar.
- Option to track URL usage (Requires CybraryN™ software).
- Control preference of multiple browser windows.
- Enable or disable File Save, File Page Setup, and File Print commands.
- Implement your own customized activity logo.

### Benefits

- Simple to use, hassle free administration.
- Prevent users from modifying the browser's Internet Options, modifying Favorites, accessing History.
- Lock browser to one specific site, or a list of sites (e.g., your online catalog).
- Use CybrarySite™ software as a proxy allowing patrons/users to only access sites configured in CybrarySite™ software.

### Requirements

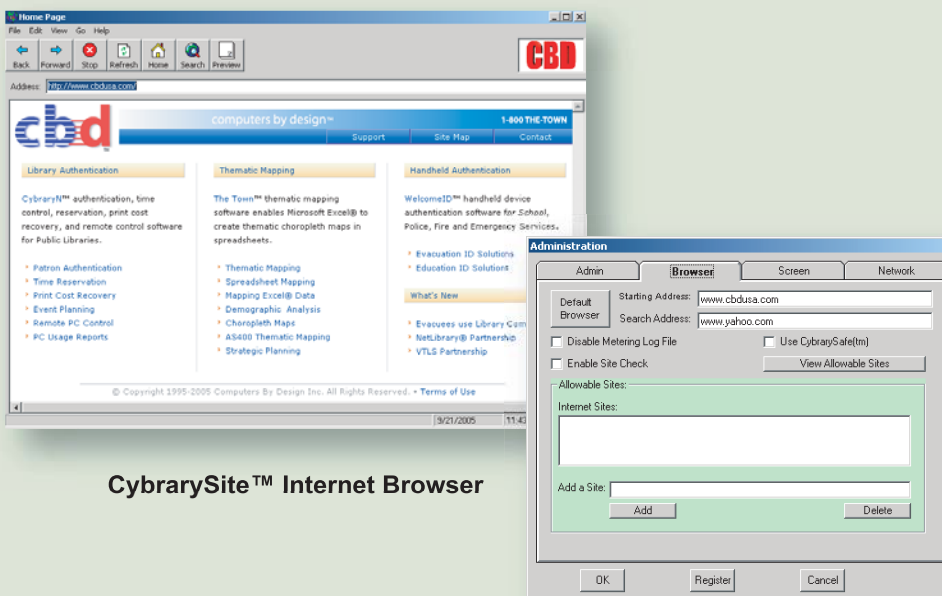

- Windows® 98/NT/2000/XP compatible computer.
- Microsoft Internet Explorer® Version 5.5. or higher.

The CybrarySite™ software is a special Web browser designed especially for use in public areas such as libraries, schools, and information kiosks. The CybrarySite™ software is based on the Microsoft Internet Explorer® engine to provide your users with a familiar browser experience while at the same time protecting your browser settings and configuration.

The CybrarySite™ software also supports Proxy Servers. This feature allows customers to seamlessly integrate proxy-based Internet filtering into their controlled computing environment.

Advanced CybrarySite™ software settings allow you to create your own blocked or allowed site list, limiting patrons to only a few web pages if desired.
